

Enviro-Spray™

TOTAL WATER CONTROL SYSTEM

Fire Fighting

Features for Water Cart Trucks

WATER TANK LEVEL INDICATOR The LCD Bar Graph indicator provides instant operator information maximising truck turn around times to maintain sufficient water supply during fire fighting operations.

WATER CANNON The Enviro-Spray™ water cannon is able to throw water 70+ metres at a rate in excess of 2000 litres per minute. The water cannon can be remotely controlled from the operators cabin, being Hyden's preferred method of operation due to greater operator protection and ease of communication access.

AUXILIARY OUTLETS Enviro Spray™ allows for connection of fire fighting hoses to Auxiliary outlets. Water volume to the auxiliary outlets can be increased or decreased as necessary via cab control.

SYSTEM INTEGRITY The Enviro Spray™ critical components such as the water motor/pump module and hydraulic control box are located at the rear of the truck. This ensures the main Enviro-Spray™ components have maximum protection from mechanical environmental damage.

FOAM INJECTION While fire fighting, if foam is required the Enviro-Spray™ system will meter the correct percentage of AFFF fire foam into the water stream.
